

## EVENING LECTURE

# Stavros Niarchos Foundation Cultural Centre

Image: Yiorgis Yerolymbos

The recently-opened Stavros Niarchos Foundation Cultural Centre (SNFCC), Athens, aspires to be a new monument to culture, learning and humanity. Over the last 10 years, Expedition Engineering and Omete have been working with Renzo Piano Building Workshop to design the SNFCC; comprising new homes for the Greek National Library, the Greek National Opera, and a large, much needed, Public Park.

This talk will give a whistle-stop tour of the project, then focus in on the structural engineering innovations – from the visible to the invisible – which we hope will help the cultural centre bring enjoyment and delight to the public; now, and for many years to come.

### **Presented by: Dr Pete Winslow CEng MStructE**

Pete is an Associate at Expedition Engineering, dividing his time between structural engineering design projects and Expedition's R&D initiatives. He has worked on several of Expedition's best-known projects, including the London 2012 Olympic Velodrome and the Infinity footbridge, as well as the SNFCC – for which he was a core member of the main canopy engineering team.

**6.30pm**

**26<sup>th</sup> September 2017**

**Room 281**

**DIT Bolton Street, Dublin 1**

**(Admission FREE – All Welcome)**
